Hi my is Tracey Qiao Yin Ho and I've been hacked on Instagram.

On March 23rd 2022, I was on SFU's Surrey Campus until I've gotten an unexpected message on Instagram (@Jessie.c78) that I needed to change my email. At first thought it was a scam, but it wasn't. They given me a fake email account to change my personal account. After I notice that I couldn't log in to my Instagram account, then I started panicking and freakout. I tried logging in multiple times by Face ID and email and nothing worked. That's when my mom came to my room and ask me those questions I refuse to answer. At night I searched on YouTube to get answers and still nothing works. This made me so angry and furious. Some of my friends message me and ask questions about it and I told them not to follow @Jessie.c78. That user gave shit invalid reasons for nothing, also I had that account for 9 years now.

I just don't understand why fake users can steal your personal accounts nowadays, it's ridiculous. I even wrote some emotions on my personal journal on how I felt on social media. I really want to sue Instagram because there're not being reasonable on spotting fake users. I hate their community guideline because it can be annoying sometimes. That's why I want revenge to stop fake users or hackers on any social media platforms on what users see. That's why I came up with an idea called anti-hackers/scammers.
This will show the evidence on how hackers can steal your personal information. I refuse to start all over again you know why, because I worked my ass off that account and I'm not going back to square one ever again. Couple months I email to CBC's marketplace to share a story, but unfortunately there was no reply. I thought any news station could help me on hackers on social media, but usually very busy 24/7.

Another thought I was curious about is Bitcoin, What is Bitcoin exactly? Is it real change? I found two posts in Instagram that aren't mine and saying it was bitcoin from TD Bank of $10,841 from e-transfer and one show a picture of a vehicle of $20,000.

After a couple days on March 26th 2022, I have decided to delete my old Facebook account for good which took me time. And I also had to delete my Microsoft outlook (hotmail.com) account as well. I took a break from social media to calm myself down and I couldn’t even sleep for months from this nightmare and got really depressed and cried over it. Why does society doesn’t stop the bitcoin crap? Looking at those photos I didn’t post really make me sick and throw up. I feel like every users facing the same issue as well in all countries for many years. I feel guilty that social media isn’t doing anything to prevent this issue.

I was afraid at first, for not speaking up or that my friends may hate me. Seeing my Instagram account being hacked really made me feel hurt and claim to commit suicide from death. Reason why I want to spread the message on YouTube is getting the help on what social media is doing on people’s life. Those hackers and scammers need to stop working from bitcoin or e-transfers cause they need a better life then ruining other people’s day. It is destroying people’s life and misery of internet piracy, which means is stealing other users personal accounts and information. Just like how I remember reacting on YouTube experts on scammers. I wish I have my account back so it doesn’t have to be so difficult all the time. I feel like I’m a victim who is being targeted that I didn’t do which leads me to an unexpected message to a crime. That’s why I came up with this idea with a group for facebook and discord so that any fake users can be spotted.
